## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 10, 12, 19, 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mustajarvi (6,430,163) in view of Lopponen (5,590,400).

Claims 1, 10 are rejected because Mustajarvi teaches a method comprising: when a packet associated control channel is available, transmitting the data via the packet associated control channel (PACCH used as a control channel). What Mustajarvi fails to teach is and when a packet associated control channel is not available, transmitting the control data via a time slot allocated for the transmission of the control data. Lopponen teaches converting a traffic channel to a new signaling channel (slot) when the signaling channel is not available. It would have been obvious to one of ordinary skill in the art to combine Mustajarvi with Lopponen for the purpose of enabling a control slot to be used when the

PACCH is unavailable. The motivation is that control signals can be sent without having to wait for the PACCH and saves time.

Claims 3, 12, 19, 26 are rejected for the same reasons as claims 1, 10 because a substitute control channel(slot) is made available.

***Allowable Subject Matter***

Claims 2, 4-9, 11, 13-18, 20-25, 27-32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
